Online open consultation on the Global Indicator Framework for the Targets of the Generation Equality Action Coalitions (6 December - 24 December 2021)

READ ME FIRST:

- 1. The list below contains an initial proposed set of indicators for monitoring the Targets of the 6 Action Coalitions (AC). The list is based on earlier consultations with relevant stakeholders as part of the AC blueprint development (see Global Acceleration Plan report), inputs and feedback from AC thematic leads, leaders and co-leaders, relevant international agencies and other entities that are data producers/technical experts in the relevant thematic area.
- 2. The aim of this open consultation is to seek further inputs from a broad array of stakeholders with the objective of developing a robust and comprehensive list of indicators for monitoring the Action Coalition Targets.
- 3. To reduce the reporting burden and limit duplication of efforts, where possible, existing global indicator frameworks such as the SDGs will be leveraged. As much as possible, only one indicator per target will be selected.
- 4. The current list of indicators contains suggested indicators below each target, as well as the proposed primary sources for each of the indicators. Where an indicator is an SDG indicator, this is indicated in column 3. For the suggested indicators, the state of statistical development is assessed using a three-tier system which has been adapted using the SDG indicator framework (see para no. 6 below for further information). This three-tier system is based on current information availability and may need to be revisited as more complete information becomes available.
- 5. For all indicators, disaggregations by key characteristics by sex, age, residence (U/R) and other characteristics, as relevant and possible are recommended and encouraged, see chapeau in red before the list of indicators.
- 6. Each indicator is classified using the following tiering classification: Tier 1: Indicator is conceptually clear, has an internationally established methodology and/or standards for cross-country comparability are available. Comparable data are regularly produced and reported by countries/relevant stakeholders. Tier 2: Indicator is conceptually clear, has an internationally established methodology and/or standards for cross-country comparability are available. Comparable cross-country data are not widely available. Tier 3: No internationally established methodology or standards are yet available for the indicator.
- 7. For some targets, no indicators have been identified yet. Commenters are encouraged to provide suggestions throughout but especially under targets that are missing an indicator.

* Note on Disaggregation: All indicators should be disaggregated by sex, age (e.g. adolescents), location (e.g. urban/rural), income, race/ethnicity, and other characteristics such as disability, migrant status and sexual orientation and gender identity as relevant and where possible.
