

COUNTED & VISIBLE TOOLKIT

Computation of selected gender-specific and gender-relevant Sustainable Development Goals indicators in selected countries using SPSS

THE INTER-SECRETARIAT
**WORKING GROUP ON
HOUSEHOLD SURVEYS**

About the Report

The Counted and Visible: Toolkit to Better Utilize Existing Data from Household Surveys to Generate Disaggregated Gender Statistics (Counted and Visible Toolkit) provides a compilation of tools and mechanisms used by several countries to produce evidence to inform gender-responsive policies and catalyze actions to leave no one behind. This publication was developed by UN Women, in collaboration with the Inter-Secretariat Working Group on Household Surveys (ISWGHS). From the technical to the strategic, the publication also takes holistic approach to production of disaggregated gender statistics showcasing good country practices – from the commitment of national statistical systems to uptake and use. The digital version of the publication can be found at: <https://data.unwomen.org/resources/counted-and-visible-toolkit>.

This publication, a complementary technical resource of the Toolkit, is a comprehensive compilation of statistical computing exercises via SPSS to produce disaggregated gender statistics covering 13 Sustainable Development Goals indicators using publicly available datasets of select countries.

NOTE TO USER

Software

This technical resource provides a step-by-step guide in producing and assessing disaggregated gender statistics using SPSS. The scripts were produced using SPSS version 26. However, the commands used were basic codes and will work in earlier or later versions of the statistical software.

Indicators

Disaggregated gender statistics were produced for 13 Sustainable Development Goals (SDG) indicators – one for each Goal and one for each SDG 5 target – data permitting. In some cases where no gender-specific or gender-relevant indicators are available, a related indicator was computed instead.

Additional codes are provided to disaggregate the indicator by wealth index and/or by type of location (urban/rural).

Dataset

The disaggregated gender statistics were computed using the latest Demographic and Health Survey (DHS) data of selected countries, mainly using the individual data file for women. DHS data are publicly available upon request via <https://dhsprogram.com/>. Weights in DHS data files need to be divided by 1,000,000 as they were computed to six decimal points but presented in the standard recode files without the decimal point.

In one indicator, the data for Multiple Indicator Survey (MICS) was used. MICS datasets can be downloaded for free via <https://mics.unicef.org/surveys> after registration.

Country selection

In generating relevant disaggregated gender statistics, mainly the datasets and variables of UN Women's Women Count programme pathfinder countries or other supported countries by the programme have been used.

Standard error (SE) and Coefficient of Variation (CV)

The codes will directly produce SE and CV which are used to assess the quality (particularly precision and reliability) of disaggregated gender statistics produced. In SPSS, resulting CV should be multiplied by 100.

Low value of SE is preferred. For CV, there are no internationally agreed standards or recommendation as thresholds vary country to country and surveys to surveys. The Counted and Visible Toolkit suggests this classification of estimates:

VALUE OF CV	SUGGESTED CLASSIFICATION OF ESTIMATES (x)
$x \leq 10\%$	Highly reliable
$10\% > x \geq 20\%$	Sufficiently reliable
$20\% > x \geq 33\%$	Still acceptable but should be used with caution.
$x > 33\%$	Caveats should be provided in terms of the level of reliability of the estimate.

LIST OF INDICATORS

Goal 1. End poverty in all its forms everywhere & Goal 10. Reduce inequality within and among countries

(Related Indicator) Proportion of women who belong to the poorest 20% of the population, by age and persons with disability

Goal 2. End hunger, achieve food security and improved nutrition and promote sustainable agriculture

2.2.3 Prevalence of anaemia in women aged 15 to 49 years, by pregnancy status

Goal 3. Ensure healthy lives and promote well-being for all at all ages

3.1.2 Proportion of births attended by skilled health personnel

3.7.1 Proportion of women of reproductive age (aged 15–49 years) who have their need for family planning satisfied with modern methods

Goal 4. Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

(Related Indicator) Proportion of women with primary or less education

Goal 5. Achieve gender equality and empower all women and girls

5.2.1 Proportion of ever-partnered women and girls aged 15 years and older subjected to physical, sexual or psychological violence by a current or former intimate partner in the previous 12 months, by form of violence and by age

5.3.1 Proportion of women aged 20–24 years who were married or in a union before age 15 and before age 18

5.6.1 Proportion of women aged 15–49 years who make their own informed decisions regarding contraceptive use and reproductive health care¹

5.b.1 Proportion of women who own a mobile telephone²

Goal 7. Ensure access to affordable, reliable, sustainable and modern energy for all

7.1.2 Proportion of women with primary reliance on clean fuels and technology³

Goal 8. Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

8.10.2 Proportion of women (15 years and older) with an account at a bank or other financial institution or with a mobile-money-service provider⁴

Goal 16. Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

16.2.3 Proportion of young women aged 18–29 years who experienced sexual violence by age 18

Goal 17. Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

17.8.1 Proportion of women using the Internet in the last 12 months⁵

¹ Full SDG indicator: Proportion of women aged 15–49 years who make their own informed decisions regarding sexual relations, contraceptive use and reproductive health care.

² Full SDG indicator: Proportion of individuals who own a mobile telephone, by sex

³ Full SDG indicator: Proportion of population with primary reliance on clean fuels and technology

⁴ Full SDG indicator: Proportion of adults (15 years and older) with an account at a bank or other financial institution or with a mobile-money-service provider

⁵ Full SDG indicator: Proportion of individuals using the Internet in the last three months.

COUNTRIES AND DATA SOURCES

SDG	COUNTRY	DATASET	DATA FILE
1.x	Albania	Demographic and Health Survey 2017-18	ALIR71FL
