

Structure of the framework

- Suggestion that migration might be its own category (or at least more prominent in the elaboration)
- Perhaps minerals should be mentioned in natural resources
- How can we better refer to the context issues (like education) directly in the framework.

What might be missing or not working?

- Additional focus on environmental migration.
- How transport decisions are made: purchase of electric vehicles (could be addressed in indicator 16, if we had a list of green products)
- Waste picking and recycling, linked to SDG 11.6.1 and 12.5.1
- Waste generation, sorting, food waste by sex
- LGBTQI and gender identity – perhaps with climate change affected persons, migration, etc.
- Heat mortality or winter-related mortality
- The consumer spending on products indicator does not make a link to SCP. Perhaps it should say spending on green products or something similar. (Environmental Goods and Services)
- Green jobs (maybe ask ILO)
- Could add a module on consumer behavior to existing questionnaires.
