Annex 4: Internet use changes since the onset of COVID-19

Figure A1: Growth in site traffic from search¹

¹ Data on site traffic from search is used as a proxy to observe growth in Internet usage. Analysis looked at the top sites from each country and data on the share of traffic for each site that comes from search data (this data was derived from Amazon). The share is multiplied by the pre-COVID-19 and post-COVID-19 average search volume and summed across sites in order to give a representation of how much internet usage has grown pre versus post COVID-19. A limitation of this method is that monthly data is unavailable for share of traffic.
