How community-led data can lead to action

Filling the gaps: Does non-official data hold any promise?
Claudia Wells, Director of Data Use, Development Initiatives
27th February 2020
Community led data leads to action

• Community level data can make a powerful contribution
• Focus our attention as locally as we can

If communities can take ownership of identifying and prioritising indicators of success, and track progress toward achieving the Sustainable Development Goals (SDGs) locally, we are in a powerful position to ensure no one is left behind.

How community-led data can lead to action/ www.devinit.org
Case study: Lanet Umoja, Kenya

Results

• Of those households engaged in farming that are headed by women, only 50% owned the land

• Despite malaria being the most-reported illness, only half of households are fitted with bed nets

• ‘Illnesses related to diseases borne in unsafe drinking water’ is the second-highest health issue reported in the location.

• About 73% of the children who have not received immunisation come from a single-parent household.
Case study: Lanet Umoja, Kenya

4 years ago community led data improved the lives of over 12,000 residents… how?

Data on:
- Water sources
- Water borne disease
- Number of households

Water filters in every household!

Chief Kariuki shows how to clean a water filter

Julia Kinyanjui drinks water she has fetched from her new filter

Project led by Open Institute with Development Initiatives partnering to provide data quality and data analysis

Approach and focus

Examine

Engage

Empower

Bangladesh
Universal health coverage (SDG 3.8)
Target groups: floating people and street dwellers

India
SDGs 1-8, 10, 11, and 16
Target Groups:
20 marginalised groups, (scheduled castes and tribes; transgender; bonded labourers; urban poor, and others)

Kenya
Socio-econ. and political inclusion (SDG 10.2)
Target Groups:
Women, persons with disabilities, young people, farmers, older people, slum-dwellers.

Nepal
Gender equality + empowerment of women (SDG 5.1)
Target Groups:
Young women and girls.

Vietnam
Socio-econ. and political inclusion (SDG 10.2)
Target Groups:
People living in poverty; ethnic minorities; people with disabilities; elderly people; young people.
Nepal – community scorecards

Gender equality and empowerment of women
SDG 5.1 – Women and young girls

- Local Women’s Groups in collaboration with service providers
- 41 indicators (both official and supplementary)
- 9 wards, 3 municipalities, 3 provinces

Results
- Better targeting at municipal level
- Supplementary indicators highlight implementation gaps
- Dialogues with local decision makers on gender-sensitive planning and policies

How community-led data can lead to action/ www.devinit.org
Key Challenges

Upholding Ethical Practices
Gathering data and feedback in an ethical and robust way

Validation
Getting community-driven data recognized by decision-makers

Capacity Building
Training and assessing the level of support needed for a robust study

Fundraising
Using global partnerships to raise funds

How community-led data can lead to action/ www.devinit.org
Recommendations

• Understand the data landscape – complement rather than compete with official statistics

• Ensure that collection methods, quality and limitations are transparent, it’s all about the metadata

• Invest in the capability of community led users

• Develop trust between local partners – service providers, planners and communities

• Collaboration with local government is vital
